

OLIVE Exports addresses Energy Issues in India *offering Best LED Lighting Products*

SHYAM S. JINDAL, MANAGING DIRECTOR, OLIVE EXPORTS PVT. LTD.

Recent technology advances in solid state lighting (SSL) or LED (light emitting diode) lighting make it possible for us to reduce the energy used for street, parking lot & garage, and airport walkway lighting by between 25% and 70+% depending on the technology being replaced. Initially the Payback periods was very high which was vary from 4 to 10 years, depending on the type of new light installed, old light replaced, and maintenance costs. Those costs and payback periods are coming down rapidly.

- The issue we are addressing is how to significantly reduce energy use in outdoor lighting while saving money for our government and its citizens by doing it.
- If this problem is not addressed now, we will be wasting money and energy. It is an economic axiom when dealing with energy conservation measures that if the project financing can be obtained for the payback period, one creates an immediate positive cash flow in the budget by financing the project and paying to amortize the principle and interest with the savings. Simply put, if we do not do this we will pay more to waste energy than to save it. That is true in both the short and long run.

OLIVE EXPORTS PVT. LTD. is an ISO 9001:2008 organization, has been incorporated in 1994 and manufacturing and exporting consumer goods, industrial products. The company has been managed by the experts of electronics and lighting industry professionals to design and manufacturing world-class products. We have around 10 patents into the area of LED lighting and more than 20 products being manufactured by us. The company has filed one application for grant of patent in LED lights to save the power load up to 98% for a specific use.

Our products not only deliver the highest performance and electrical specifications, but are also designed keeping in mind the highest standards of aesthetics and functionality. It is for this reason that in a short period of time we have been able to service some of the most fastidious and discerning customers in India and have developed a strong reference list of

customers and projects.

We are one of the biggest manufacturers in India for LED Lighting products. We have manufacturing plants in IMT Manesar, Gurgaon with a working area over 15000 sq. feet.

We are manufacturing all these indoor and outdoor lighting products in our factory and we have immediate replacement of many of traditional lighting products. We have many designs in LED lighting products.

Important aspects of our LED street lights. Some of them are as follows:

- We are using LEDs of top international brands of high power 1 wt. or more and lumen output is greater than 100, these LEDs give very wide spread and the must have been observed by your technicians while inspecting our product. We can supply the products as per your specified product/LEDs.
- We are using complete heat sink bodies for fixing the LEDs and the life of our housing part will support the expected life of LED i.e. approx 50000 hrs. Or more.
- We are fixing the LEDs on very high quality international standards with complete curing process of the LEDs to protect them any types moisture etc.
- We are manufacturing the LED drivers in our factory as per requirement of lighting products and these are suitable for universal input.
- We can design the lights as per LUX requirement.
- Our quality and prices are unbeatable.

The Company has developed its own moulds with complete Research & Design for all the street lights, bay lights& flood lights. Many of the products have been patented from government of India.
